PROFESSIONAL SUMMARY

React-focused Frontend Engineer with 6+ years of experience building production web applications, internal tools, and interactive learning platforms. Strong background in frontend architecture, complex UI state, role-based systems, and browser-based tooling. Built and maintained a live coding platform used by students, teachers, and administrators, with a focus on scalable interfaces, reusable component systems, and product-driven feature delivery. Former instructor with a practical understanding of both user needs and implementation constraints.

PROFESSIONAL EXPERIENCE

Frontend Engineer / Instructor | CodeStream Studios LLC — **January 2020 - March 2025**

Remote

- Led frontend architecture and feature development for a production React platform serving students, teachers, and administrators.
- Built a browser-based coding environment for web and Python projects, including lesson content, multi-file editing, live preview, and terminal-style execution flows.
- Designed and implemented classroom, grading, organization, and licensing workflows that supported multiple user roles and permission levels.
- Developed role-based access control patterns across the application to manage admin, teacher, and student experiences safely and consistently.
- Created reusable component systems and shared UI patterns to improve consistency, maintainability, and delivery speed across the product.
- Implemented cloud-backed project persistence so users could save, return to, and continue work across sessions and devices.
- Built grading and reporting features that supported pass/fail, numeric, and letter-based evaluation models for instructional workflows.
- Integrated sandboxed code execution for HTML, CSS, JavaScript, and Python to enable in-browser project building and feedback loops.
- Worked directly from real classroom and instructional needs, translating product requirements into practical shipped features.

CORE SKILLS

React	JavaScript (ES6+)	HTML5	CSS3	Component Architecture	Context API
UI Systems	Design Systems	RSuite	Node.js	Express.js	REST APIs
AWS S3	AWS Lambda	RBAC	Sandboxed iFrames	Skulpt	Git
GitHub	Agile Collaboration				

SELECTED PROJECTS

CodeStream Online Studio

Production React platform for online coding education with classroom workflows, project persistence, grading tools, and role-based user experiences.

Browser-Based IDE Experience

Three-panel coding interface with lesson content, multi-file editing, live preview, and in-browser execution for web and Python projects.

Daimler Trucks Hackathon Winner

Hands-free, voice-driven repair assistant prototype combining speech input, guided workflows, and backend service logic for technicians.

AWARD WINNING PROJECT

Daimler Trucks Hackathon | Winning Team — **2019**

- Helped design a hands-free, voice-driven repair assistant for technicians working in service environments.
- Contributed to a workflow combining speech input, natural-language interpretation, and backend service logic.
- Supported a working prototype that guided technicians step-by-step through repair tasks without requiring constant screen interaction.
- Delivered a solution selected as the winning project among 20+ teams.

EDUCATION

Southern Methodist University (SMU)
Full Stack Web Development Program

Tech Talent South (TTS)
Full Stack Java Spring Boot Program
